February 2023

Acute Care Facility Profiles

2017-18 to 2021-22

Five-year trend analysis by facility

On a yearly basis, these profiles are compiled on the acute care facilities operating within New Brunswick. These profiles are based on the clinical and statistical data from the Canadian Institute for Health Information (CIHI) data holdings: Discharge Abstract Database (DAD) and Management Information System (MIS). They also incorporate data from the New Brunswick Surgical Access Registry. These profiles showcase specific areas of interest within each facility's activity. The areas of interest have been trended over the last five years and it has been noted whether there have been any significant changes.

This report contains a hospital-level summary of the common activities performed at each of New Brunswick's acute care facilities.

Each individual facility's profile contains 5-year trending information under the following headings:

- Inpatient Discharges (Acute Care)
- Average Age of Inpatients
- Average Length of stay (ALOS)
- Expected Length of Stay (ELOS)
- Conservable Bed Days
- Alternative Level of Care (ALC) days
- % Admitted through the Emergency Department
- % Short Stay Admissions (3 days or less) through the Emergency Department
- Average and Total Weighted Cases (using Resource Intensity Weights)
- Deliveries and Caesarean Section rates
- In-Hospital Deaths and Crude Mortality rates
- Ambulatory Care Sensitive Conditions (ACSC)
- Bed Occupancy
- Emergency Department visits – by triage levels
- Inpatient Surgical cases and Day Surgery visits
- Surgical Wait Times

The COVID-19 pandemic has greatly impacted health care in New Brunswick therefore, 2020-21 and 2021-22 data should be interpreted within this context.

! indicates low volumes or a significant change in the indicator results from year to year and should be interpreted with caution.

† Cost of a Standard Hospital Stay data is for fiscal 2020-21

± "Average Distance Travelled to Facility in Kms" is calculated based on the straight-line distance between the patient's residential postal code and the hospital's postal code.

RIW = Resource Intensity Weight - a methodology used to indicate the intensity of resources used during a patient's hospitalization.
