

WEEKLY NEW BRUNSWICK INFLUENZA REPORT

Reporting period: March 20 to March 26 2016 (week 12)

Summary:

In New Brunswick, most influenza indicators remained elevated in week 12

New Brunswick:

- There have been 150 positive influenza detections in week 12. To date this season, a total of 655 influenza detections have been reported, 580 influenza A (unsubtyped), 50 influenza A (H1N1)pdm09, 4 influenza A (H3) and 21 influenza B.
- There has been 17 influenza associated hospitalizations during week 12. So far this season, a total of 112 influenza associated hospitalizations were reported in New Brunswick, including 5 deaths.
- The ILI consultation rate was 18.9 consultations per 1,000 patients visits, and was below the expected levels for this time of year.
- One new influenza outbreak was reported in a long-term care facility.

Canada:

- Influenza activity continued to decrease across Canada. All regions in Canada reported sporadic or localized activity.
- The number of positive influenza B tests reported continues to increase, but still accounted for only 30% of positive influenza tests in week 12.
- Adults age 65 and over accounted for the majority of hospitalizations in week 12 and accounts for the largest proportion of hospitalizations to date this season.
- Hospitalizations, ICU admissions and deaths among the pediatric population, while declining, remain above expected levels based on the past several influenza seasons.
- 2,882 positive laboratory detections of influenza were reported during week 12, and the percentage of laboratory tests positive for influenza was 30%.
- The national ILI consultation rate was 43.6 consultations per 1,000 patients' visits, the highest ILI consultation rate was found in the 5-19 years age group.
- 27 new laboratory confirmed influenza outbreaks were reported: 13 in long-term care facilities, 9 in hospitals and 5 in community settings. Additionally, one ILI outbreak was reported in a school.
- Antigenic characterization: the National Microbiology Laboratory (NML) has characterized 1312 influenza viruses [149 A(H3N2), 775 A(H1N1) and 388 influenza B]. All characterized viruses were antigenically related to their respective vaccine strain.

International:

Seasonal influenza:

- Globally, elevated levels of influenza activity continued to be reported in North America, in parts of Europe and in Northern Temperate Asia. An increase in influenza B virus activity has been reported in Northern Temperate Asia, South East Asia and Europe.

Emerging Respiratory Viruses: No new updates this week

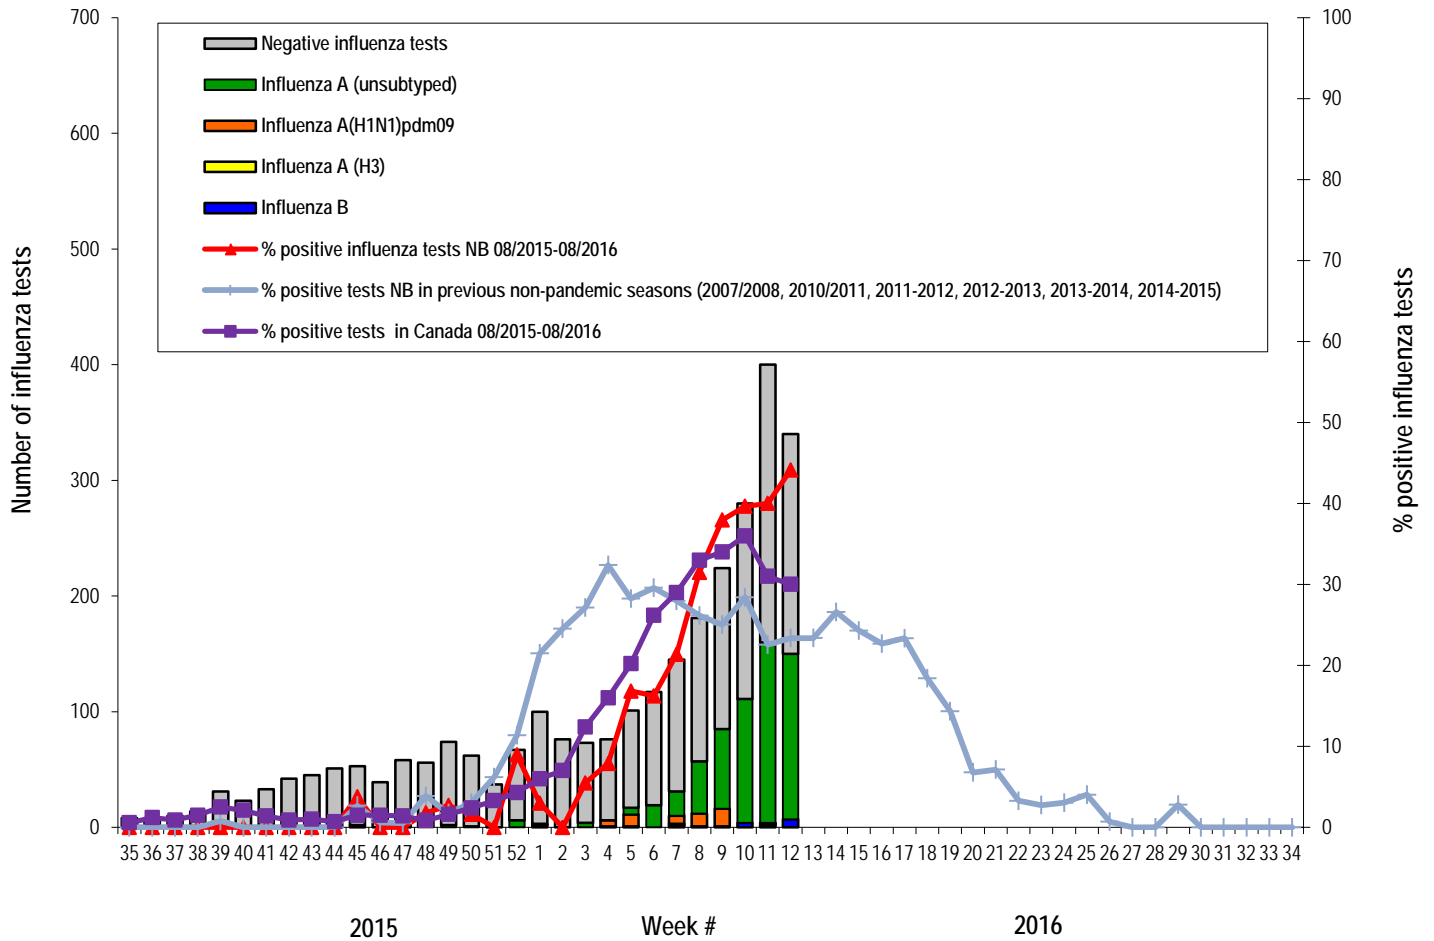

- MERS CoV:

1) Influenza Laboratory Data¹

- Most influenza indicators remained elevated in week 12.
- 150 influenza detections were reported during week 12.
- Since the beginning of the season, 655 positive influenza detections were reported, 21 influenza B and 580 influenza A (unsubtyped), 4 influenza A (H3) and 50 influenza A (H1N1)pdm09.

¹ Surveillance specimens are submitted by recruited New Brunswick Sentinel Practitioner Influenza Network (NB SPIN) practitioners, which are comprised of sites in Emergency Rooms, in Family Practice, in First Nations communities, in Nursing Home, in Universities and in Community Health Centers. Diagnostic specimens are submitted by physicians in the community/hospital setting. Influenza laboratory data is comprised of results from surveillance and diagnostic specimens. All laboratory specimens are tested using a real-time PCR assay, which is a rapid detection method designed for detection of all known variants of influenza A and B. All laboratory-confirmed cases are reported for the week when laboratory confirmation was received.

Graph 1: Number and percent of positive influenza specimens in New Brunswick by week, up to March 26 2016 (data source: G. Dumont Lab results)

Note: Most of the Influenza A unsubtyped specimens are of the predominant strain.

Table 1: Positive influenza test results by Health Region, in New Brunswick for reporting week, cumulative current and previous seasons.
(data source: G. Dumont lab results up to March 26 2016)

2) ILI Consultation Rates³

- During week 12, the ILI consultation rate was 18.9 consultations per 1,000 patients visits, and was below the expected levels for week 12.
During week 12, the sentinel response rate was 32%, for both the FluWatch sentinel physicians and the NB SPIN practitioners

Graph 2: ILI Consultation Rates in New Brunswick, by report week, season 2015/16 compared to previous seasons*

* The mean rate was based on data from the 1996/97 to 2014/2015 seasons and excludes the Pandemic season (2009-2010).

3) ILI and Laboratory-Confirmed Outbreak Data

Table 2: ILI activity/outbreaks in New Brunswick nursing homes and schools for the reporting week, current and previous seasons.

	Reporting period: Mar./20/2016–Mar./26/2016			Cumulative # of outbreaks season 2015-2016	Cumulative # of outbreaks season 2014-2015
	Lab-confirmed outbreaks in Nursing homes*	ILI school outbreaks**	Lab-confirmed outbreaks in Other settings*		
Zone 1	0 out of 13	0 out of 74	0	5	14
Zone 2	1 out of 15	0 out of 81	0	2	15
Zone 3	0 out of 14	0 out of 95	0	0	12
Zone 4	0 out of 6	0 out of 22	0	0	6
Zone 5	0 out of 2	0 out of 18	0	0	4
Zone 6	0 out of 9	0 out of 35	0	3	5
Zone 7	0 out of 4	0 out of 27	0	4	8
Total NB	1 out of 63	0 out of 352	0	14	64

*Two or more ILI cases within a seven day period, including at least one laboratory-confirmed case of influenza. Outbreaks are reported in the week when laboratory confirmation is received.

**Schools reporting greater than 10% absenteeism which is likely due to ILI.

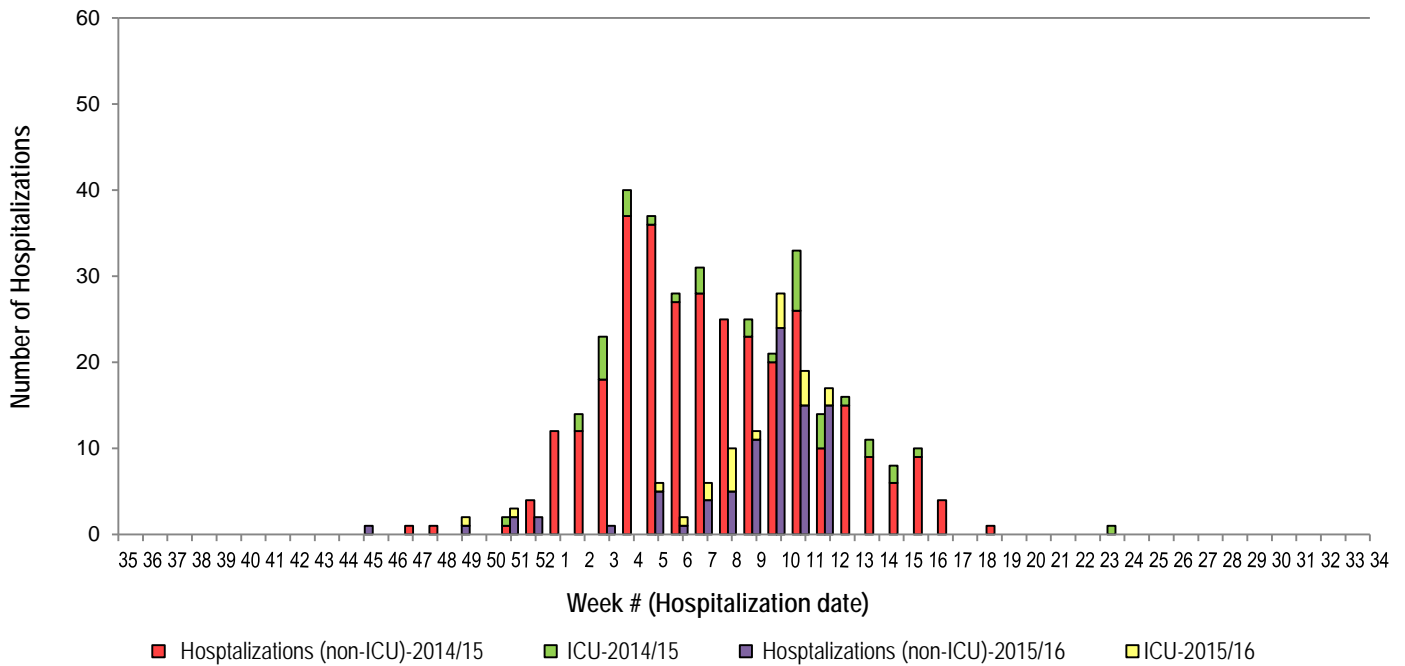

³ A total of 28 practitioner sites (16 FluWatch sentinel physicians and 12 NB SPIN sites) are recruited this season to report the number of ILI patients and total patient consultations one day during a reporting week.

Graph 3: Number of Influenza Outbreaks (nursing homes, hospitals, other)⁴ and ILI Outbreaks (schools)⁵ reported to Public Health in New Brunswick, by report week, season 2015/16.

4) Influenza associated Hospitalization⁴ and Death⁵ Surveillance⁶

Graph 4: Influenza associated Hospitalizations and ICU admissions in New Brunswick, by week of hospitalization for current and past season.*

*Those who had been hospitalized 15 days or more prior to laboratory confirmation date were excluded from the graph

** Five deaths were reported so far in season 2015-2016.

⁴ Hospitalizations (including ICU admissions) are influenza associated; they may or may not be due to influenza.

⁵ Deaths are influenza associated; influenza may not be the direct cause of death.

⁶ In early January 2014, the Office of the Chief Medical Officer of Health implemented a new provincial surveillance system in collaboration with the Regional Health Authorities to monitor influenza-associated hospitalizations, intensive care unit admissions and deaths.

National Flu Watch Program - Additional information on influenza activity in Canada and around the world is available on the Public Health Agency of Canada's website at: <http://www.phac-aspc.gc.ca/fluwatch/>
